- SMARTBOARD PDF

Output

- Standard: Production printer, File Server
- Optional: CD, DVD, and removable media

Output Format

- PDF with ticketing
- Embedded setpagedevice commands for media selection, duplex selection, and other job ticket functions on printers that support this feature

Supported Printers

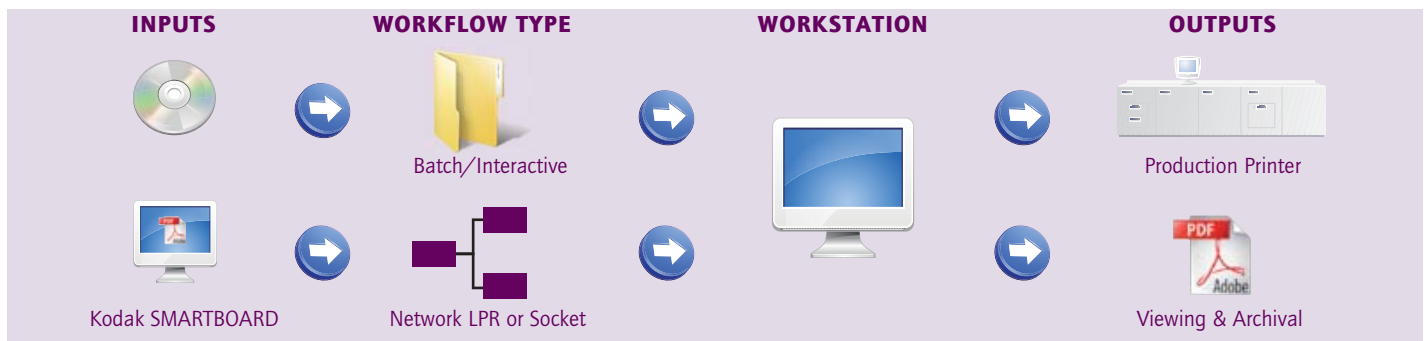

- Enhanced support for select production printers—contact RSA for more details

Leverage your investment in SMARTBOARD with KDKPrint™. KDKPrint transforms output from the premier make ready tool, SmartBoard, so that it can be used on non-Kodak printers without re-ticketing. Because SmartBoard documents are stored as PDF files with proprietary ticketing information, they are limited to being produced only on Kodak printers. KDKPrint converts SmartBoard files so they can be printed on any PostScript or PDF printer, or used as a PDF for viewing, sharing, and archival.

KDKPrint features and benefits

- KDKPrint is a cost-effective solution that pays dividends each time you need to print the converted documents on any supported PostScript printer.
- Ticketing transformation can be done in batches, or for on-the-fly file print conversions.
- Converted files don't require re-ticketing.
- An XML job ticket is created for each file, providing the operator with detailed job information.
- The automated workflow for processing files is supported by a complete audit trail.
- KDKPrint is available on a PC workstation.
- Like other RSA transform products, KDKPrint supports customers with mixed print vendor environments, providing the flexibility to use the software and hardware that best meets your needs.
- By using a lower cost make ready tool, KDKPrint helps your print shop or graphic arts firm standardize on a single make ready tool and can potentially decrease the training time needed for make ready tools.
