

# RSA QDirect Print Server

## Specification Sheet

### Why QDirect Print Server?

- > QDirect Print Server includes the functionality to route jobs throughout the enterprise.
- > For advanced applications, QDirect Output Manager has the ability to add Mainframe Connectivity, Integration with WebCRD, Makeready, and RSA's Transform Products, plus QDirect.SCAN, Custom Readers, Writers, and Scripts.
- > Choose the best solution for each enterprise's unique business requirements.

### Overview

QDirect fulfills the need for easy queuing, viewing, releasing, reprinting, and deleting of jobs.

RSA QDirect Print Server is simplified version of QDirect Enterprise Output Manager, intended for customers that require robust job queuing and routing capabilities.

Operators access QDirect throughout the network via a graphical user interface and can route jobs on-the-fly.

QDirect Print Server is a turnkey hardware and software "appliance" that ships from RSA, ready to be plugged in to an enterprise's network and powered on.

### Target Customers will have

- Multiple printers.
- A desire to control the submission of jobs to the printers i.e. manage when and where jobs are printed.
- Printer(s) without robust print controllers (most MFPs and light production printers).

### System Requirements

- Compatibly with printers from all major print vendors.
- A Dell Tower server is included in the base price of QDirect Print Server. Rack option not currently available.
- Customer desktop or workstation running Sun Java JRE 1.6 for QDirect Client application.
